TrueSum

INVENTORY AGE INTELLIGENCE

Every unit has an age.

Know how long every piece of stock has been waiting, what it will take to move it, and which shelves are quietly tying up cash, straight from your SAP Business One data.

FRESH · 0–3 MONTHS

24+ MONTHS · CRITICAL

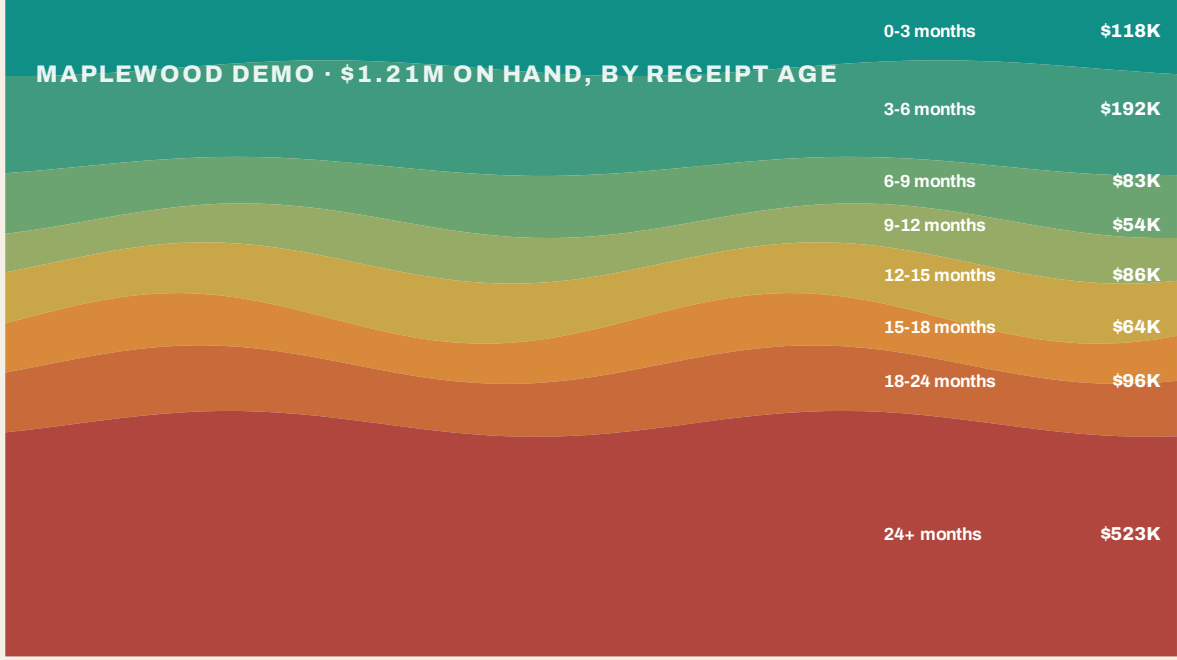

EACH RING IS A RECEIPT-AGE LAYER OF THE DEMO INVENTORY
INSIDE: NEWEST STOCK · OUTSIDE: OLDEST

WHY WE BUILT IT

Stock doesn't spoil. It just stops moving.

A shelf of licensed tees looks the same at three months and three years. The difference shows up later, as a write-off, a markdown or a warehouse bill.

Inventory Age Intelligence reads one SKU-history extract and gives every unit two clocks: how long since it last sold, and how long it has been sitting in the warehouse, layer by layer. It separates what is protected for customers and Amazon from what is genuinely free, and turns the result into a ranked list of what to do next.

1

Self-contained HTML file. Workbook read in the browser.

2

Clocks per line: time since last sale and receipt-layer holding age.

63%

of the demo's $1.21M has been on the shelf 12 months or longer.

0

Rows of your data uploaded anywhere.

SIX QUESTIONS IT ANSWERS

The questions every stock review asks.

Five tabs: Overview, Risk Lab, FBA Replenishment, Stock Ledger and Data Audit. Every card and bar opens the matching stock lines, and a Rep view hides costs and values for sharing outside finance.

How old is my stock, really?

Receipt-layer holding age per unit, not an average per SKU. 200 old units and 500 new ones are reported as exactly that.

PAGE 04 · 06

What hasn't sold, and since when?

Last-sale ageing for finished goods, and a separate adoption clock for lines that have never sold.

PAGE 05 · 07

What is actually free?

On hand reconciled to committed, Amazon-allocated, customer-program protected and genuinely uncommitted stock.

PAGE 04 · 10

Where is the risk concentrated?

By licensor, licence, warehouse or item group, with a stock-cover risk map and ranked drivers.

PAGE 06 · 08

What should Amazon get next?

FBA replenishment from backstock warehouses to target cover, plus suggested supplier PO quantities.

PAGE 09

Can I trust the numbers?

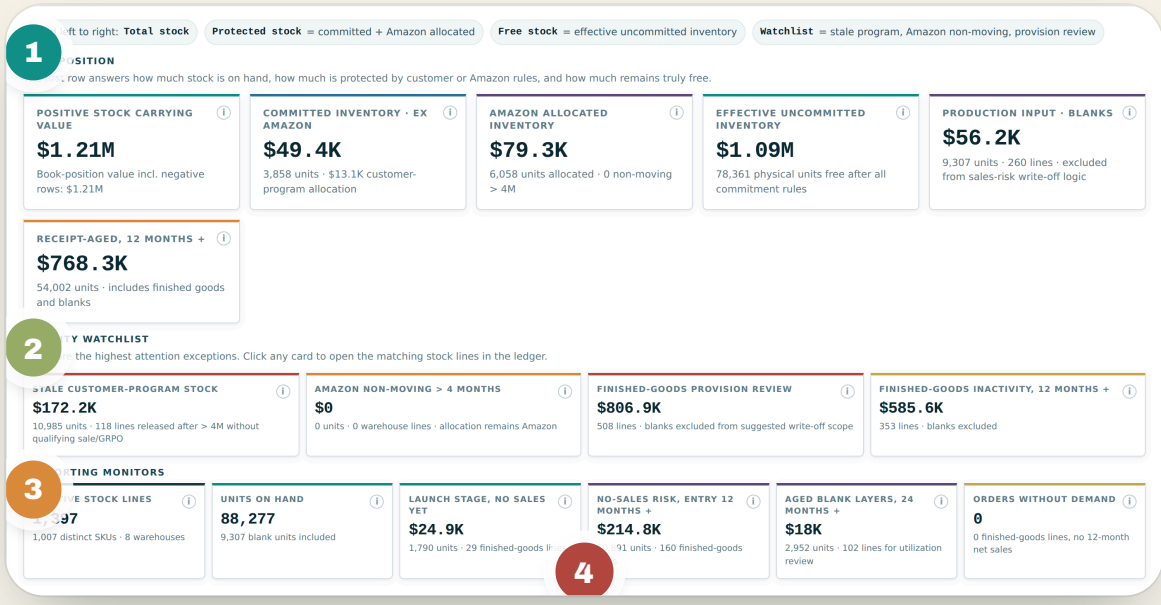

A data-audit tab with seventeen control checks before anyone acts on the ageing.

PAGE 11

What's on hand, and what's actually free.

The first row answers the three questions finance asks first. The next two rows are where to look.

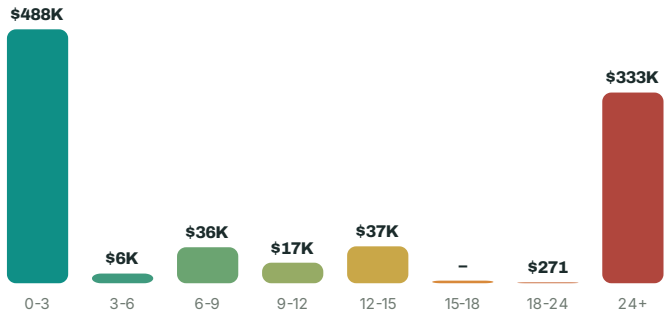

1. **Core position:** carrying value, committed, Amazon-allocated and effective uncommitted stock, with blanks split out.
2. **Priority watchlist:** stale program stock, Amazon non-movers, provision review and 12-month inactivity.
3. **Supporting monitors:** launch-stage lines, no-sales risk, aged blank layers and orders feeding dead stock.
4. **Every card opens** the exact stock lines behind it in the ledger.

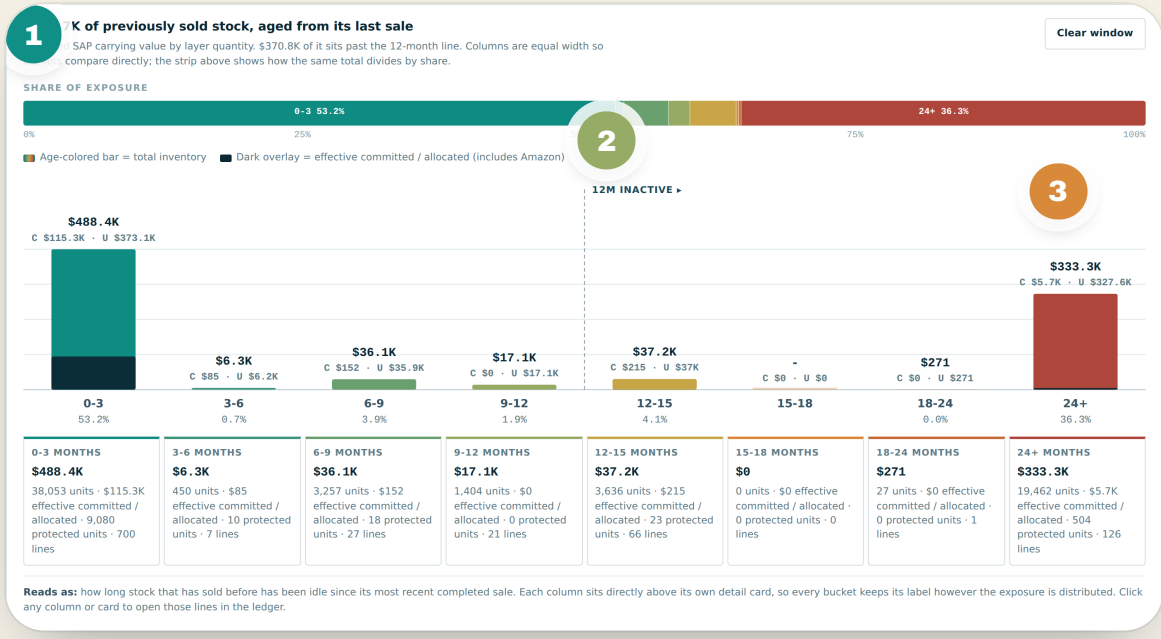

Maplewood demo: $1.21M on hand; $1.09M effectively uncommitted after customer-program and Amazon rules; $768K held 12 months or more.

When did it last sell?

The demand clock for previously sold finished goods: how long since the last sale, in eight bands from fresh to critical.

Carrying value of previously sold finished goods by months since last sale.

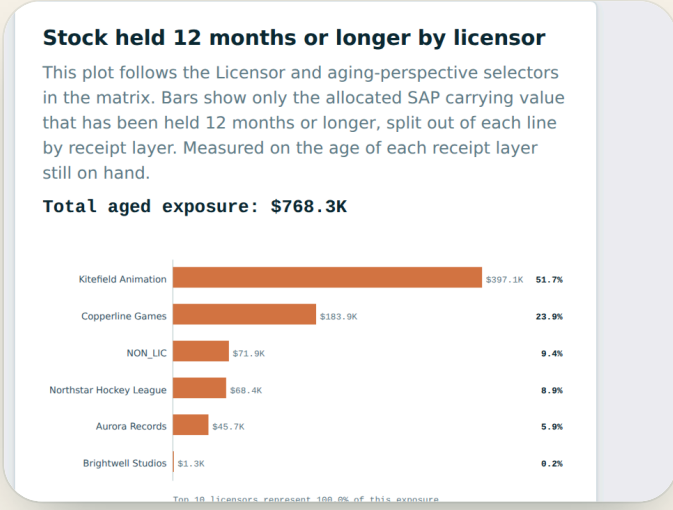

1. **Share of exposure** strip: one glance at how much sits past twelve months.
2. **The 12-month line** separates normal sell-through from inactivity.
3. **Each column** splits allocated from free, and opens its lines.

A heat map of time, by licensor.

Rows are licensors, licences, warehouses or item groups; columns are receipt-age layers. Read across a row and you see a business relationship's whole history on the shelf.

	0-3	3-6	6-9	9-12	12-15	15-18	18-24	24+	TOTAL
Kitefield Animation	$29K	$44K	$28K	$20K	$24K	$28K	$8K	$338K	$518K
Copperline Games	$5K	$5K	$7K	$8K	$14K	$10K	$53K	$107K	$209K
Brightwell Studios	$55K	$101K	$19K	$8K	$954	$128		$186	$184K
Northstar Hockey League	$21K	$26K	$13K	$11K	$8K	$9K	$15K	$36K	$139K
Non-licensed	$8K	$16K	$16K	$7K	$10K	$6K	$14K	$43K	$119K
Aurora Records					$28K	$11K	$6K		$46K

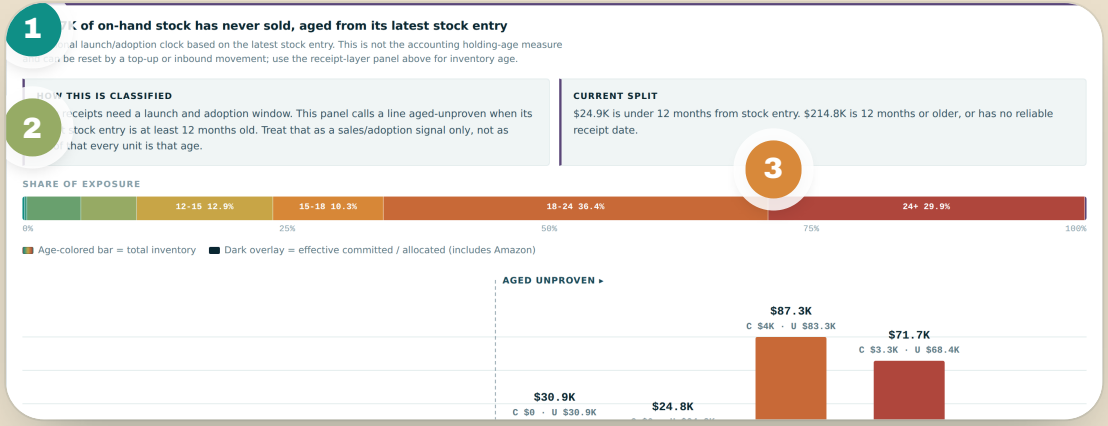

Drawn from the Maplewood demo. Kitefield Animation's $338K in the 24+ column is one expired licence: Captain Comet stock that stopped selling when the licence ended.

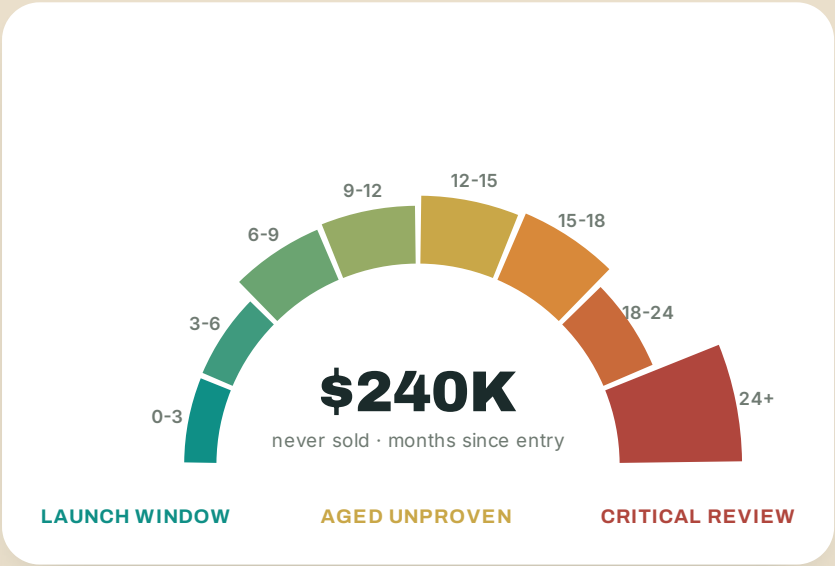

1 **Stock held 12+ months by licensor:** the same selectors drive the concentration chart, so the conversation with each licensor starts with one number.

Never sold is not the same as dead.

A line that arrived last month needs time. A line that arrived two years ago and never sold needs a decision. The adoption clock tells them apart.

1. **How it's classified:** new receipts reset the clock; transfers and returns don't.
2. **Entry age bands** with a status for each, from launch window to critical review.
3. Neon Racers in the demo: bought in 2024, never sold, now in critical review.

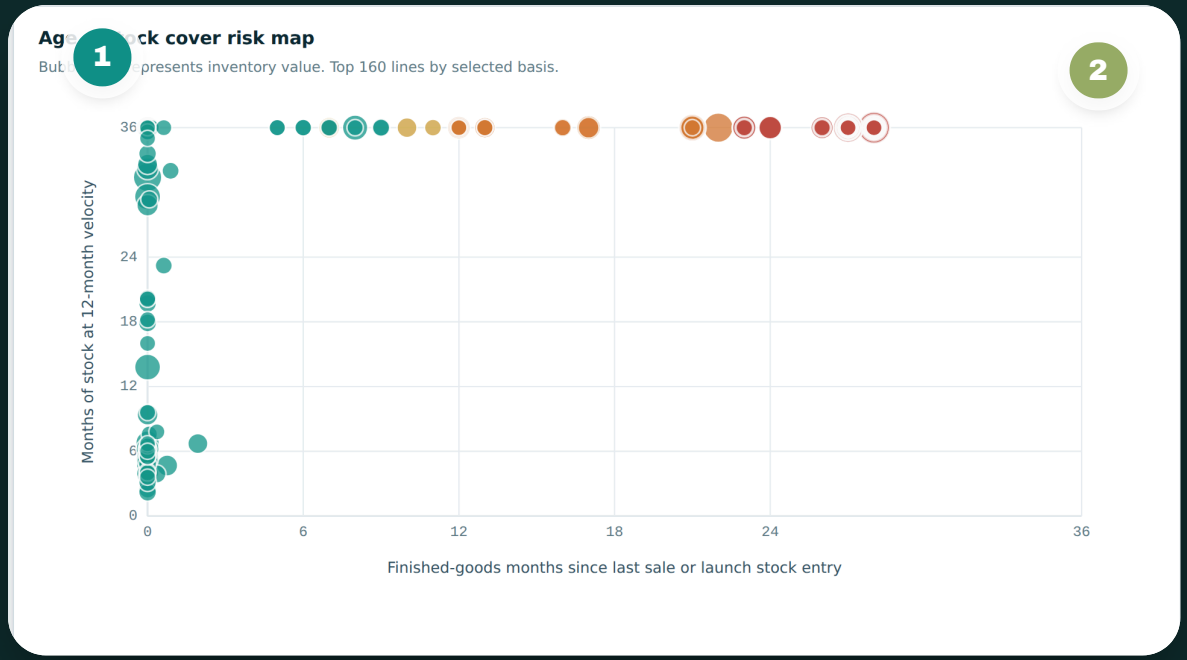

RISK LAB

Every line, on one map.

Across: months since the last sale or launch. Up: months of stock at the current sales pace. Bubble size: value. The top right corner is where the money is stuck.

1. **Risk-driver concentration** ranks the reasons: no demand for 24 months, aged unproven, bought without demand.
2. **Evidence-ranked action queue** gives each line a score, a recommended action and the evidence behind it.
3. **Transfer opportunities** spot idle stock in one warehouse that sells in another.

Risk-driver concentration

Receipt recency separates normal launch-stage stock from genuinely aged, unproven inventory.

No demand for 24 months	**$405.1K**
221 warehouse lines need liquidation / recoverability review.	
Aged unproven stock	**$214.8K**
160 lines have no completed sales history and their latest stock entry is at least 12 months old.	
Launch-stage stock, no sale yet	**$416**
10 no-sales-history lines were received or moved into the warehouse within 6 months.	

$405K

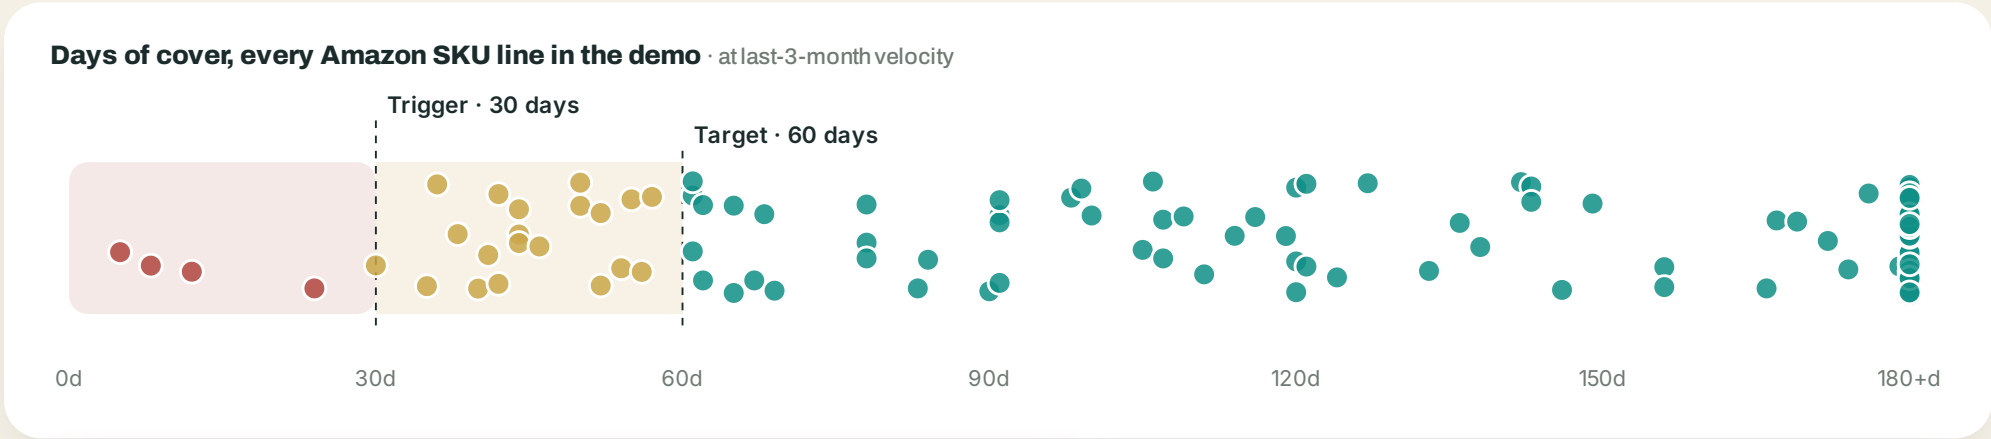

in lines with no demand for 24 months, the largest driver in the demo. Most of it is one expired licence.

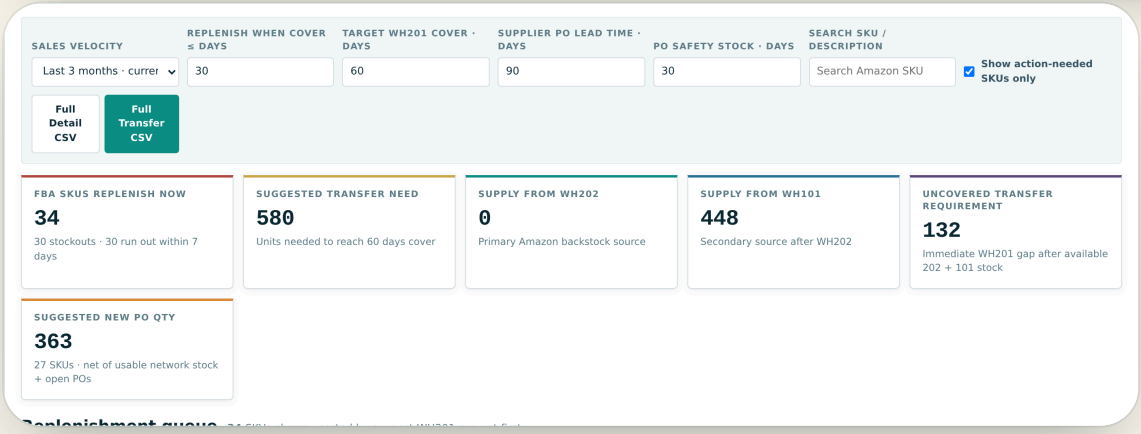

FBA REPLENISHMENT

Keep Amazon stocked.

From the stock you already own, before you buy more.

Velocity from the last 3, 6 or 12 months; a trigger and target in days of cover; transfers drawn from the Amazon backstock warehouse first, then the main warehouse; and a suggested supplier PO for what the network can't cover.

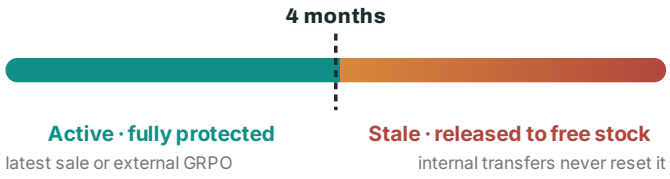

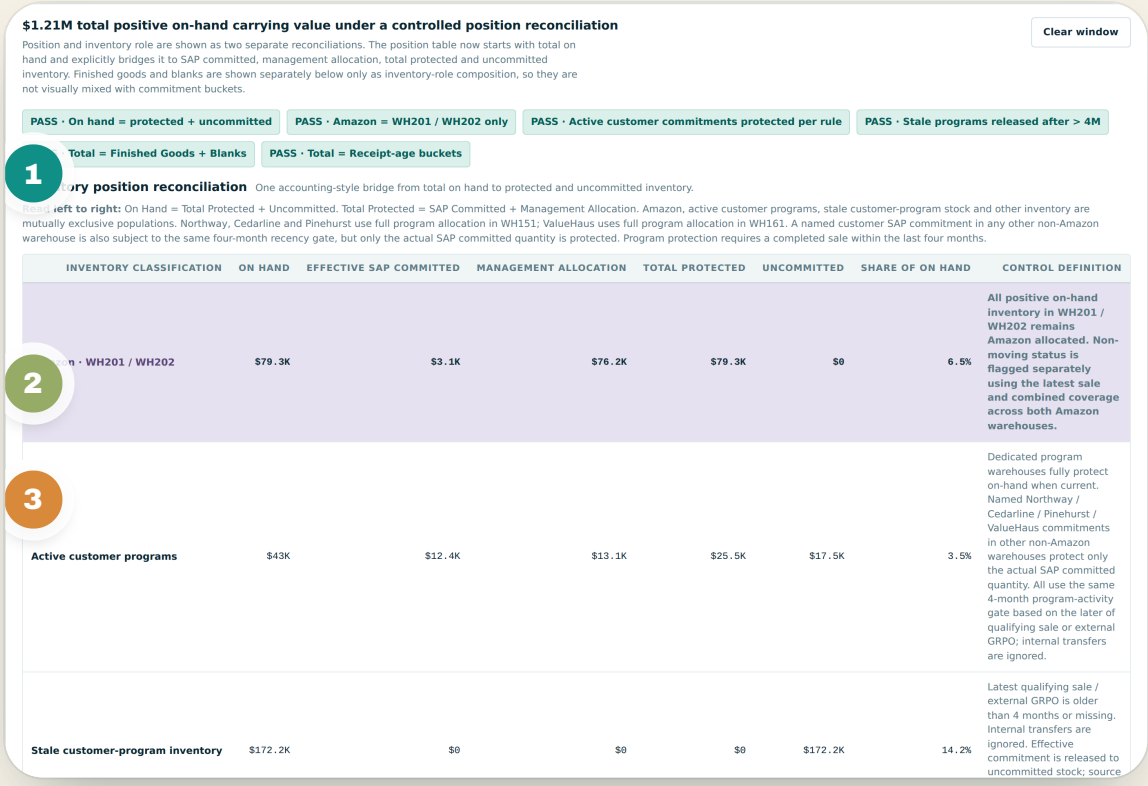

1. **Replenishment queue** sorted by soonest run-out, with transfer need and backstock available.
2. **Full detail and transfer CSVs** ready for the warehouse.
3. **Supplier PO quantity** net of usable network stock and open POs, using lead time plus safety days.

Protected while it's active. Released when it's not.

Customer-program stock is only treated as committed while the program is alive: a qualifying sale or external receipt within four months.

The four-month gate

$1.21M total positive on-hand carrying value under a controlled position reconciliation

Position and inventory role are shown as two separate reconciliations. The position table now starts with total on hand and explicitly bridges it to SAP committed, management allocation, total protected and uncommitted inventory. Finished goods and blanks are shown separately below only as inventory-role composition, so they are not visually mixed with commitment buckets.

Clear window

PASS · On hand = protected + uncommitted | PASS · Amazon = WH201 / WH202 only | PASS · Active customer commitments protected per rule | PASS · Stale programs released after > 4M | Total = Finished Goods + Blanks | PASS · Total = Receipt-age buckets

1

ory position reconciliation One accounting-style bridge from total on hand to protected and uncommitted inventory.

Read left to right: On Hand = Total Protected + Uncommitted. Total Protected = SAP Committed + Management Allocation. Amazon, active customer programs, stale customer-program stock and other inventory are mutually exclusive populations. Northway, Cedarline and Pinehurst use full program allocation in WH151; ValueHaus uses full program allocation in WH161. A named customer SAP commitment in any other non-Amazon warehouse is also subject to the same four-month recency gate, but only the actual SAP committed quantity is protected. Program protection requires a completed sale within the last four months.

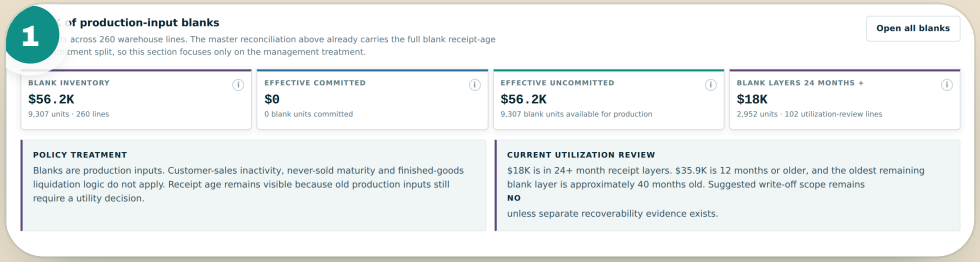

INVENTORY CLASSIFICATION	ON HAND	EFFECTIVE SAP COMMITTED	MANAGEMENT ALLOCATION	TOTAL PROTECTED	UNCOMMITTED	SHARE OF ON HAND	CONTROL DEFINITION
2 · WH201 / WH202	$79.3K	$3.1K	$76.2K	$79.3K	$0	6.5%	All positive on-hand inventory in WH201 / WH202 remains Amazon allocated. Non-moving status is flagged separately using the latest sale and combined coverage across both Amazon warehouses.
3 Active customer programs	$43K	$12.4K	$13.1K	$25.5K	$17.5K	3.5%	Dedicated program warehouses fully protect on-hand when current. Named Northway / Cedarline / Pinehurst / ValueHaus commitments in other non-Amazon warehouses protect only the actual SAP committed quantity. All use the same 4-month program-activity gate based on the later of qualifying sale or external GRPO; internal transfers are ignored.
Stale customer-program inventory	$172.2K	$0	$0	$0	$172.2K	14.2%	Latest qualifying sale / external GRPO is older than 4 months or missing. Internal transfers are ignored. Effective commitment is released to uncommitted stock; source

1 **Pass checks** prove the bridge adds up.

2 **Amazon** WH201/202 stays allocated.

3 **Stale programs** fall to free stock.

Raw materials age too. And data needs checking.

1 **Production-input blanks** are kept out of sales-risk and write-off logic and reviewed on holding age and future utility instead. Layers older than 24 months are flagged for a utilization decision.

2 **Seventeen control checks** run on every load: zero carrying value, negative stock, layers that don't reconcile, duplicate rows, Amazon and program control failures. The demo plants a few so you can see them caught.

The stock ledger: every line with its risk score, recommended action and evidence; filter, sort, choose columns, export.

1

Run the query

One saved SAP Business One SKU-history query: one row per item and warehouse, with receipt layers and sales history.

2

Drop the workbook

Read locally in the browser. Classification columns such as licensor and licence are detected automatically.

3

Review

Overview, Risk Lab and FBA. Click any card to open the matching lines in the stock ledger.

4

Export and share

CSV from the ledger and FBA queue, and HTML report exports, including a Rep version with no costs or values.

YOUR DATA STAYS YOURS

A file on your computer or network drive; nothing is uploaded.

NO SERVER, NO INSTALL

Opens in Chrome or Edge. Sharing it is sending a file.

PROVISION BY EVIDENCE

No hard-coded write-off percentages: provision review is flagged, the rate is your policy.

SEE IT ON YOUR OWN STOCK

How old is your inventory?

Send one SAP extract and we'll walk you through your own ageing, risk map and replenishment queue.

WHAT YOU RECEIVE

- Inventory Age Intelligence as a single HTML file
- The SAP Business One SKU-history query (receipt layers, sales history, commitments)
- Configuration of your warehouses, Amazon locations and customer-program rules
- A demo file on fictional data for training and onboarding
- Updates as the suite evolves, delivered as a replacement file

TrueSum by GEMSEN
